

PROJECT X – HOLOGRAM CONCIERGE GOAL SHEET

1. OVERVIEW

The Project X Hologram Concierge is a next-generation virtual building agent blending AI, real-time human support, access control integrations, and robotics. Its purpose is to enhance or replace traditional concierge staffing with a unified interface capable of operating access control, elevators, cameras, and building systems.

2. SHORT-TERM GOALS (0–12 months)

- Door/Entrance Access Integration
- Elevator Integration (Basic)
- Face Recognition
- Live Human Support Escalation
- Static Avatar Model
- Tenant Interaction: packages, visitor instructions, FAQ
- Mail Room package logging and notifications

3. LONG-TERM GOALS (12–36 months)

- Robotics Integration (delivery, escort, patrol)
- Building System Integration (HVAC, amenity booking)
- Intelligent Lockdown protocols
- Dynamic Avatar evolution
- Portfolio-level multi-building support
- Predictive AI behaviors

4. CURRENT FUNCTIONALITY

- Greeting and tenant assistance
- Visitor check-in
- Access control operations
- Elevator calls
- Mail/Package notifications
- Human concierge live escalation
- PMS/API tasks and logging
- Work order creation
- Compliance reporting

5. CAPABILITIES

Today:

- Performs 80% of concierge tasks
- Identity verification
- Remote live assistance
- Delivery and access notifications
- Logging and PMS integrations

Future:

- Robotics-based delivery and escort
- Security patrols
- Dynamic avatar with emotion/gesture responses
- Autonomous building control
- Emergency response integration

6. LIMITATIONS

Short-term:

- No physical mobility until robotics is added
- Limited override access to life-safety systems
- Imperfect identity matching edge cases
- Limited crowd control

Long-term:

- Cannot physically restrain individuals
- Cannot override legal access requirements
- Cannot replace armed security
- Cannot perform hardware repairs

7. STRATEGIC GOAL: DISPLACEMENT OF ON-SITE CONCIERGE

Objective:

Reduce on-site concierge staffing by 60–90% while increasing security, convenience, and NOI.

How:

- AI-driven interactions
- Robotics for physical tasks
- SOC for high-risk escalation
- System integrations eliminate redundancy

Outcome:

- 24/7 coverage without staffing costs
- Consistent experience
- Higher building security
- Lower operational cost and increased NOI
